

## **Accomplishments of the GETAC Stroke Committee**

Per Health and Safety Code 773.001 the Stroke Committee has developed a state wide emergency EMS stroke transport plan and developed stroke facility criteria for Comprehensive, Primary and Support Stroke Facilities. This was the first three tier plan in the United States. We continue to revise and augment the plan and criteria based on scientific advances.

Other recommendations implemented to date include training requirements on stroke recognition and treatment, protocols for rapid transport and bypass to stroke facilities, and recommendations on stroke prevention and community education.
