## Urban Planning and Public Health: Navigating Multidimensional Strain and Identifying Mitigation Strategies in Rapidly Growing 'Hot Cities'

**Robert Hammarberg, DrPH, MPA**

UTHealth Houston School of Public Health

Rapidly growing “hot cities” experience dynamic challenges for land usage, housing, transportation, programming, service delivery, and overall population health. This presentation unveils insights from a comprehensive study involving urban planning officials from nine rapidly growing U.S. cities. The findings will offer a glimpse into current mitigation strategies, highlighting their implications for public health and urban planning administrators. By emphasizing the role of population data, it aims to foster a deeper understanding of sustainable urban development amidst rapid growth.

### **Objectives:**

- Identify the public health and healthcare challenges faced by rapidly growing cities.
- Describe the intersectoral relationship between urban planning and public health.
- Evaluate the shared experiences and response patterns across diverse cities, assessing the effectiveness of different strategies in addressing the challenges of rapid urban growth.
- Apply the insights from the presentation to develop or enhance mitigation strategies for managing rapid population growth in their urban planning/public health contexts.

**WHEN**

**Wednesday, May 29, 2024**

**11:00am – 12:30pm**

**WHERE**

**GoToWebinar**
