¹California Serogroup includes California encephalitis, Jamestown Canyon, Keystone, La Crosse, snowshoe hare, and trivittatus viruses.

²PVD - Presumptive viremic blood donors are people who had no symptoms at the time of donating blood through a blood collection agency, but whose blood tested positive when screened for the presence of West Nile virus or Zika virus. Unless they meet the case reporting criteria, they are not counted as a case for official reporting purposes and are not included in the "Total" column.

*Four mosquito pools were positive for both West Nile virus and St. Louis encephalitis virus and are represented twice in the totals.

**One equine was positive for both West Nile virus and eastern equine encephalitis virus and is represented twice in the totals.
