

## Results from the 2007 Jefferson County Retrospective Immunization School Survey

The Jefferson County Retrospective Immunization School Survey is a school-based study that measures vaccination coverage levels of kindergarteners retrospectively at 24 months of age. Children were considered up-to-date on their immunizations if they had completed the 4-3-1 series (4 doses of diphtheria-tetanus-pertussis- containing vaccine (DTaP/DTP or DT), 3 doses of polio vaccine, 1 dose of measles-mumps-rubella vaccine (MMR)) by the time they turned 24 months of age. Also calculated in the survey were the percentages of children completing the 4-3-1-3-3 series and the 4-3-1-3-3-1 series by 24 months of age. The 4-3-1-3-3 series is composed of the 4:3:1 series plus 3 doses of *Haemophilus influenzae* type b vaccine (Hib), and 3 doses of hepatitis B vaccine (HepB). The 4-3-1-3-3-1 series is composed of the 4-3-1-3-3 series plus 1 dose of varicella vaccine on or after the 1<sup>st</sup> birthday and unadjusted for varicella disease history. Thus, the 2007 data reflect the vaccination coverage levels of the 2006-2007 school year kindergarten population when they were 24 months of age (**about 3 years prior to the survey date**). These children were born between 09/09/2000 – 07/17/2003.

The survey included 25 of the 40 schools in the county. The schools were randomly selected from the Texas Education Agency roster. Approximately 45 student records were obtained from each selected school. Dates of birth and the dates of vaccination were obtained and entered into CoCASA. 1086 records were included in the analysis. The Jefferson County 4-3-1, 4-3-1-3-3, and 4-3-1-3-3-1 vaccination coverage levels at 24 months of age were **63.7%**, **59.1%**, and **56.1%**, respectively. The individual vaccination coverage levels for vaccines routinely recommended for children were as follows (including pneumococcal vaccine (PCV)):

Vaccine	Percent Vaccinated by 24 months of Age
4 DTP/DTaP/DT	67.6
3 Polio	85.8
1 MMR	87.6
3 Hib	88.8
3 Hep B	86.4
1 Var	82.2
3 PCV	46.8
4 PCV	18.7

At the time of the survey, 92.2% of kindergarten students in Jefferson County had received at least 1 dose of hepatitis A vaccine, and 66.3% had completed the 2 dose series.

These data cannot be used to assess current interventions to raise immunization coverage levels.
