Department of State Health Services
Exceptional Items: Reference Materials

Senate Finance Committee
86th Legislature
February 5, 2019
Content

- Summary of SB 1 Impact on DSHS Exceptional Items
- Exceptional Items Summary Table
- Exceptional Items Details
SB 1: Impact on DSHS Exceptional Item Requests

SB 1 addressed needs in the following areas, allowing DSHS to remove or reduce requests.

✦ Increase of $1.3 Million in General Revenue to replace 49 vehicles
✦ Increase of $0.3 Million in General Revenue and $4.7 Million in Federal Funds to fund Seat Management and Data Center Services costs.
✦ Rider language to facilitate security and quality of vital records needs

</table>
EI 1: Safeguard the Future of the State Public Health Laboratory

- **Address the Laboratory Shortfall, $17.6 M**: Protect the foundation of the state’s public health system by providing funds to continue full operations at the state public health laboratory.

- **Fully Implement X-ALD Newborn Screening, $7.7 M**: Allow DSHS to complete implementation of X-ALD screening.

- **Promote a Safe and Efficient Laboratory Environment, $28.4 M and 12 FTEs**: Ensure uninterrupted safe operation of laboratory testing by providing an emergency power generator, roof and HVAC repairs, information system updates, and FTEs to meet increasing testing demands.

- **Retain Trained Laboratory Science Staff, $8.4 M**: Bring 318 high turnover laboratory staff to market-range salaries to ensure a dependably staffed and experienced laboratory.

<tbody>
<tr>
<td>Public Health Lab Tests</td>
<td>1.6 million</td>
</tr>
<tr>
<td>Newborn Screens</td>
<td>800,000</td>
</tr>
</tbody>
</table>
The Laboratory is the Backbone of Texas Public Health

- Newborn Screening for 53 Disorders
- Safe Food, Milk, and Water
- Tuberculosis
- Mosquito-Borne Illness
- High Consequence Infectious Disease (e.g. Ebola)
- Biological and Chemical Threats
- Rabies
- HIV/STD Testing
The State Public Health Laboratory Has Operated at a Shortfall since 2015

The primary driver of the shortfall is a budget gap in the Newborn Screening Program.

- The Newborn Screening Program operates at an approximately $8 Million annual loss.
- The entire laboratory budget gap is $8.9 Million annual.

Due to tightening restrictions and reporting requirements, DSHS is not allowed to use HIV rebate funds to fund the full laboratory shortfall.

- HIV rebates were the primary mechanism DSHS has been using to cover the shortfall.
- DSHS received updated federal guidance this summer.
- Only expenses directly related to HIV prevention and control services are eligible.
Maintenance of Lab Equipment is Critical to Ongoing Reliability of Testing Services

- Liquid Handlers
- Specialty Freezers
- SCID Screening Equipment
- Chemical Fume Hoods
- Aging TB Equipment
- Bacteria Detectors
Leaking Roofs and Exterior Walls are a Risk to High Cost Laboratory Equipment

Makeshift Approaches for Protecting $250,000 Equipment from Incoming Rainwater

Water Damage to Walls from Roof Leaks
Lab Staff Turnover Challenges the Lab’s Ability to Maintain Timeliness and Accuracy

The state laboratory in Austin is staffed with 386 full time equivalents (FTEs) and the South Texas Laboratory is staffed with 16 FTEs.

- Testing occurs 6 days a week for newborn screening.
- 24/7 coverage for certain tests to maintain quick response times for critical public health tests.

Technical laboratorians require training of up to 18 or 24 months, depending on specialty, to be fully effective in conducting sophisticated public health testing.

This exceptional item would provide increases for the following positions that have an 18.6% turnover rate:

- Microbiologists
- Laboratory Technicians
- Chemists
- Molecular Biologists
- Medical Technologists
EI 2: Combat Maternal Mortality and Morbidity

- **Implement Maternal Safety Initiatives Statewide, $2.7 M and 6 FTEs**: Promote and scale up implementation of new TexasAIM maternal safety bundles statewide.

- **Implement a Maternal Care Coordination Pilot for High Risk Women, $2.3 M and 2 FTEs**: At least three pilot sites, establish and track outcomes for the use of maternal care coordination during routine prenatal care. Create or standardize and promote use of provider-specific risk assessment tools and training modules to identify women with high risk factors; provide education on preventive measures; and make appropriate referrals to care.

- **Increase Public Awareness and Prevention Activities, $2.0 M**: Enhance provider and community understanding about maternal risk factors and related preventive measures.

### Program Data

- Potential Birthing Hospital Partners for TexasAIM: 238
- Confirmed Maternal Deaths, 2012-2015: 382
Additional Staff Support and Resources Would Allow Texas to Maximize the Effectiveness of Maternal Safety Bundles

Total AIM Participation: 188
Birthing Hospitals
AIM Plus Hospitals: 148
AIM Basic Hospitals: 40

Next Steps for TexasAIM

◆ DSHS would like to implement a bundle for hypertension, one of the leading but most preventable causes of maternal mortality.

◆ An opioid maternal safety bundle is now being piloted; with EI funding, full roll out could take place in 2020.

◆ Bundles are available for ten maternal risk factors.

◆ As bundles are implemented, staff efforts will shift to identification of best practices and new interventions.
Complex Factors Contribute to Maternal Deaths and Require an Approach Beyond AIM

The Maternal Mortality and Morbidity Task Force found that, in 2012, an average of 5.2 factors contributed to the deaths of Texas mothers.

Types of factors that increase risk for mothers include:

- Individual and family factors, like underlying medical conditions, obesity, and chronic disease
- Provider factors, including delays in diagnosis, treatment, and appropriate referral
- Facility factors, such as lack of continuity of care from inpatient to outpatient settings
- System and community factors, like care coordination issues

Through care coordination, routine risk assessments, and increased public and provider awareness, these factors can be more comprehensively addressed at a patient and population level.
New Interventions Could Help Address Multifaceted Maternal Conditions

A care coordination pilot and new public awareness efforts can help address certain recommendations made by the Maternal Mortality and Morbidity Task Force.

- Increased attention to the health needs of high-risk populations, especially black women

- Enhanced screening and referral for maternal risk conditions

- Prioritization of care coordination for pregnant and postpartum women, for both physical and behavioral health

- Public awareness campaigns to promote health-enhancing behaviors

- Education for patients and families around postpartum care management
EI 3: Increase Quality and Security of Vital Event Records

- **Address Backlogs and Improve Customer Service, $3.04 M and 17 FTEs:** Reduce the backlog in processing vital events requests and improve responsiveness to customer needs by increasing staffing by 17 FTEs.

- **Increase Security of Vital Records, Capital Authority and 6 FTEs:** Take immediate steps to better ensure the physical security of Texas vital records through items like surveillance systems, high density shelving, appropriate fire suppression, and smoking detection. $1.6 Million in capital budget authority is needed to implement.

- **Improve the Quality of Death Data, $0 and 2 FTEs:** Provide training and ongoing support for medical certifiers to more accurately identify the cause of death on death certificates.

</tbody>
</table>

Rider 36, Death Certificate Quality Improvement

- Certifiers come from a variety of backgrounds, and have a range of experience with completing death certificates.
- Certifiers have indicated a need for a real-time feedback loop to help them maintain and improve death certificate data quality.
- They also indicated a need for real-time technical assistance with data entry, especially for those certifiers unfamiliar with the process.
- Two FTEs within this EI would be dedicated to continuation of steps taken by the Legislature and DSHS for higher vital events data quality.
EI 4: Ensure Stable Staffing of Technical and Scientific Public Health Positions

- **Public Health and TCID Nurses, $3.0 M**: Retain in-the-field public health expertise by increasing public health nurse and Texas Center for Infectious Disease nurse salary levels.
  - ~200 nurses

- **Meat Safety Inspectors, $3.4 M**: Minimize the loss of investment in training meat safety inspectors by compensating these positions at market level.
  - ~150 inspectors

- **Finance Staff, $2.4 M**: Protect the Department’s fiscal responsibility and compliance with state and federal requirements by compensating staff with financial expertise at midpoint.
  - ~120 staff

<td>Amount of Time to Train New Staff in these Positions</td>
</tr>
</tbody>
</table>
Technical and Scientific Staff Turnover Wastes Resources and Decreases Public Health Coverage

Public Health and TCID Nurses, 26.4% turnover rate

- Public Health Nurses act as the boots-on-the-ground for public health, including disease surveillance and control, immunizations, and emergency response
- TCID Nurses provide care for Tuberculosis inpatients and Hansen’s disease patients, including the most complex and difficult-to-treat forms of TB
- 6 weeks to 5 months to train new nursing staff

Meat Safety Inspectors, 20.3% turnover rate

- Inspect every livestock animal slaughtered in Texas to ensure the meat is not diseased before it enters intrastate commerce
- 2 years until the staff can operate completely independently

Finance Staff, 21.7% turnover rate

- Manage budget and accounting for complex federal and state funding streams for multiple programs that must each comply with specific state and federal laws, regulations, and policies
- At least 6 to 9 months to train new staff
EI 5: Bolster Public Health Capacity to Monitor and Respond to Outbreaks

- **Stability of the Electronic Disease Reporting System, $3.5 M and 8 FTEs**: Stabilize and maintain the dependability of this critically at-risk system called NEDSS through purchase of servers and software, and system maintenance.

- **Increased Surveillance and Analysis Capacity, $1.6 M and 7 FTEs**: Meet increasing demand to provide technical assistance to external system users, customize and improve the system for more robust disease surveillance and investigation, and coordinate support for investigation during emergencies.

- **Continuation of the Infectious Disease Response Unit, $750 K**: Provide state support for the Infectious Disease Response Unit program, which trains and equips deployable teams of experts that can safely transport patients and assist hospitals in providing care for patients suspected or confirmed with high consequence infections like Ebola, MERS, or Marburg.

Infectious Disease Response Units Maintain Readiness for High Consequence Disease

The five-year federal Ebola grant is expiring on June 30, 2020. The grant included $0.7 Million annually to maintain the IDRU program.

Without an alternate source of funding:

- Texas will lose the capability to train and exercise personnel to provide deployable surge medical support to transport and care for a patient infectious with high consequence diseases like Marburg or Ebola.

- Texas will lose the ability to store and maintain a cache of equipment and pharmaceuticals to protect medical personnel, community members, and emergency responders from exposure to infectious disease.
EI 6: Detect and Control the Spread of Tuberculosis in Texas

- **Local Health Department Capacity for TB Response, $9.2 M**: Support a more than 40 percent increase in funding to local health departments for increase TB detection and response.

- **Essential Capacity, Staffing and Tools for Responding to TB, $16.3 M and 12 FTEs**: Provide additional DSHS capacity for TB detection, follow up activities. Maintain inpatient capacity at Texas Center for Infectious Diseases (TCID). Maximize the effectiveness of DSHS support to local health departments through tools like laboratory testing support, TB nurse surge capacity, medications, video direct observed therapy, and phlebotomy training.

- **TCID Renovations, $1.8 M and 1 FTE**: Make needed repairs to TCID facilities, including repair and ongoing maintenance of the negative air pressure system, which contains the spread of airborne Tuberculosis within the facility.

- 50 Higher Ed
- 105 Senior Assisted Living
- 30 High School C
- 200 High School B
- 140 Genotype Cluster
Additional Staffing and Resources Will Increase the Effectiveness of TB Investigations

In 2015, approximately 14,500 individuals were exposed to active tuberculosis in Texas.

- Of those individuals, public health only was able to screen with 62 percent of exposed individuals.

- This is due to staffing limitations and the time needed to track and engage these individuals into screening and treatment.
Ongoing Maintenance and Renovations at TCID would Improve Safety and Operations

**Negative Air Pressure System Repair and Maintenance**

- This specialized system ensures that contagions from TB and Hansen’s Disease patients are contained appropriately within the facility.
- The system is about eight years old, a crucial point in its life span.
- With maintenance planning, a testing regimen, and a repair schedule, the dependability of this system can be maximized.

**TCID Entry Modifications**

- TCID shares a campus with other facilities.
- A lack of appropriate pathway signage, and clear entries to TCID leads to confusion for campus visitors.
- Unnecessary visitor traffic poses a risk because of the nature of the diseases being treated at TCID.

**SSLC Building Upgrade**

- The State Supported Living Center uses a building on TCID campus for staff training.
- This building needs bathroom facilities, and finishing of internal walls.
EI 7: Drive Public Health Decision-Making through Useful and Accessible Data

- **Technological Tools for Health Data Synthesis, $4.0 M and 7 FTEs**: Increase data accuracy, timeliness, and comprehensiveness by purchasing server space, query tools, and a database for merging and analyzing public health data sets.

- **Tools and Consultant for User-friendliness of DSHS Public Health Data, $500 K**: Translate public health data sets into visually meaningful and easily understandable formats and language by engaging health communications expertise for consultation.

Socioeconomic Indicators: Texas

- Average Monthly TANF Recipients: 85,650
- Average Monthly SNAP Participation: 3,550,700
- Average Monthly CHIP Enrollment: 503,619
- Count of Medicaid Clients: 3,563,947
- Medicaid Covered Births*: Not currently available
- Unemployment Rate: 8.2%
- Per Capita Income: $43,062

Births (Notability)

- Total Live Births: 387,110
- Adolescent Mothers (<18): 12,245
- Unmarried Mothers: 164,049
- Low Birth Weight: 32,175
- Prenatal Care in First Trimester: 2,219,322

Communicable Diseases - Reported Cases

- Fertility Rate: 60.8

Deaths (Mortality)

- Deaths from All Causes: 179,551
- Accidents: 9,041
- Motor Vehicle: 5,511
- Alzheimer’s: 5,204
- Assault (Homicide): 1,361
- Cancer (All): 36,209
- Breast Cancer (Female): 7,744
- Colon Cancer: 3,553
- Lung Cancer: 9,416
- Prostate Cancer: 1,762
- Cardiovascular Dis. (Stroke): 9,238

Deaths: 179,551
Rate: 47.2
Limited Server Space Results in Slow Data Processing and Long Loading Times For Users

For a set of four maps:

- Three computers solely devoted to data processing
- Four staff dedicated to the effort
- Three days, with the computers processing 24 hours a day
EI 8: One-Time Disaster Preparedness Funding for Rapid Response

**Shelter and Staging for High Cost Emergency Response Vehicles, $980 K:**
Provide one staging location with water and electricity access for medical emergency response vehicles, command and control, and specialized trailers to allow faster deployment and to protect high-cost emergency vehicle assets.

High Cost Emergency Assets are Scattered and Unprotected

- 26 emergency response vehicles, command and control, and specialized trailers across the San Antonio area
  - Future availability of these locations is uncertain; TCID grounds could be used to securely store them.
  - This slows down the ability of public health emergency responders to stage vehicles for deployment.
- These assets are unprotected from the environment, which results in shorter duration between tire changes, damage to exterior, and significantly shorter life of supplies and equipment inside the trailers.
- Having the vehicles in one location, with protective covering and access to electricity and water, would maintain the investment in these assets and allow more timely deployment in critical situations.
