### Summary

Influenza activity has been increasing in Texas over the past couple of weeks. Compared to the previous week, the percentage of specimens testing positive for influenza reported by hospital laboratories slightly increased, while the percentage of specimens testing positive for influenza reported by public health laboratories and the percentage of patient visits due to influenza-like illness (ILI) marginally decreased. Four influenza outbreaks were reported in the state. No influenza-associated pediatric deaths were reported. In addition to flu, other respiratory viruses—especially RSV and rhino/enteroviruses—were detected in Texas during week 03.
