# 2008 - 2009 Texas Influenza Surveillance Information

# **Current Flu Activity Report in PDF Format**

Influenza Surveillance Report for MMWR Week 30

The influenza (flu) activity level for Texas for the week ending August 1, 2009 was "local." For definitions of flu activity levels please see

http://www.cdc.gov/flu/weekly/fluactivity.htm. During week 30, 56 (8.1%) specimens tested by NREVSS laboratories in Texas were positive for influenza. The percentage of visits for influenza-like illness as reported by ILINet providers in Texas was below the regional baseline.

### Reports from Health Service Regions

Reports were received from all Health Service Regions (HSRs) for week 30. HSR 11 reported an increased level of flu activity compared to week 29. HSRs 2/3, 8, and 9/10 reported the same level of flu activity compared to week 29. HSRs 1, 4/5N, 6/5S, and 7 reported a decreased level of flu activity compared to week 29. For a map of Health Service Regions please visit the following website: <a href="www.dshs.state.tx.us/regions/state.shtm">www.dshs.state.tx.us/regions/state.shtm</a>

#### **Laboratory Results**

During week 30, 12 hospital laboratories and public health agencies across Texas reported conducting a total of 688 influenza tests (antigen, culture, and PCR) to the National Respiratory and Enteric Virus Surveillance System (NREVSS) sponsored by the Centers for Disease Control and Prevention (CDC). Of the 429 antigen detection tests that were performed, 47 were positive for influenza A/not subtyped. The positive results were reported from Bexar, Brazos, Collin, Colorado, Harris, and Tarrant counties.

A total of 16 reports of PCR- or culture-confirmed seasonal or unsubtyped influenza were received from public health laboratories, Scott & White Memorial Hospital in Temple, Texas Children's Hospital in Houston, and other sources for the following counties during week 30 (July 26-August 1):

| Influenza A/H1<br>(seasonal) | Influenza<br>A/H3 | Influenza A/not<br>subtyped | Influenza<br>B |  |  |  |  |  |
|------------------------------|-------------------|-----------------------------|----------------|--|--|--|--|--|
| (none)                       | (none)            | Bell County (5)             | (none)         |  |  |  |  |  |
|                              |                   | Bexar County                |                |  |  |  |  |  |
|                              | Grimes County     |                             |                |  |  |  |  |  |
|                              | Harris County (7) |                             |                |  |  |  |  |  |
|                              | Jasper County     |                             |                |  |  |  |  |  |
|                              |                   | Panola County               |                |  |  |  |  |  |

Positive point-of-care rapid tests for influenza were reported by sentinel providers throughout the state (see county map below).

#### Novel Influenza A Virus Infections

Case investigations are ongoing, and the number of confirmed cases changes frequently. Please see the DSHS website (<a href="http://www.texasflu.org">http://www.texasflu.org</a>) and the CDC website (<a href="http://www.cdc.gov/h1n1flu/">http://www.cdc.gov/h1n1flu/</a>) for more information on the current investigation.

#### **Antigenic Characterization**

CDC has reported antigenic characterization results from 51 seasonal influenza isolates [20 influenza A/H1, 8 influenza A/H3, and 23 influenza B viruses] and 3 novel influenza A H1N1 viruses received from the DSHS Laboratory since the beginning of the 2008–09 flu season. Influenza A/H1 [20]

All 20 viruses were characterized as A/Brisbane/59/2007, the influenza A/H1 component of the 2008–09 influenza vaccine for the Northern Hemisphere.

### Influenza A/H3 [8]

 All 8 viruses were characterized as A/Brisbane/10/2007, the influenza A/H3 component of the 2008-09 influenza vaccine for the Northern Hemisphere.

Influenza B (B/Victoria/02/87 and B/Yamagata/16/88 lineages) [23]

Victoria lineage [16]

• Sixteen of the influenza B viruses were characterized as belonging to the B/Victoria lineage.

Yamagata lineage [7]

 Seven viruses were characterized as B/Florida/4/2006, the influenza B component for the 2008-09 influenza vaccine for the Northern Hemisphere.

### Novel influenza A/H1 [3]

 All 3 viruses were characterized as A/California/07/2009-like (H1N1), the reference virus selected by the World Health Organization (WHO) as a candidate for the novel influenza A H1N1 vaccine.

# **Antiviral Resistance**

Since September 28, 2008, 22 seasonal influenza A/H1 isolates, 7 influenza A/H3 isolates, 22 influenza B isolates, and 3 novel influenza A H1N1 isolates from the DSHS laboratory have been tested by CDC for antiviral resistance.

| Flu<br>Types/Subtypes           | Isolates Tested (n) | Resistant Viruses,<br>Number (%)  Oseltamivir Zanamivir |       | Isolates Tested (n) | Resistant Viruses,<br>Number (%) |  |

|                                 |                     |   |       |                     | Adamantanes                      |  |
| Influenza<br>A/H1<br>(seasonal) | 22                  | 22<br>(100%)  | 0 (0) | 22                  | 0 (0)                            |  |
| Influenza<br>A/H3               | 7                   | 0 (0)   | 0 (0) | 7                   | 7 (100%)                         |  |
| Influenza B                     | 22                  | 0 (0)   | 0 (0) | N/A*                | N/A*                             |  |
| Influenza<br>A/H1 (novel)       | 3                   | 0 (0)   | 0 (0) | 3                   | 3 (100%)                         |  |

\*Adamantanes are not effective against influenza B viruses.

CDC has issued interim recommendations for use of antiviral medications in the 2008-09 influenza season. Those recommendations are available at:

### http://www.cdc.gov/flu/professionals/antivirals/index.htm.

### Influenza-Associated Pediatric Mortality

No influenza-associated pediatric fatalities were reported during week 30. Texas has reported 13 influenza-associated pediatric fatalities during the 2008-09 influenza season.

### School Closures and Institutional Outbreaks

No outbreaks were reported during week 30. DSHS has issued guidance for cases of ILI and novel influenza A H1N1 in summer camps. This guidance is available at

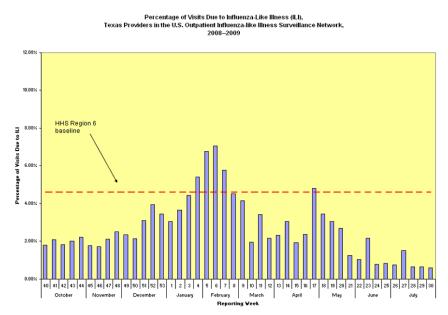

# www.dshs.state.tx.us/swineflu/summercamp-flu-guide.shtm.

#### U.S. Outpatient Influenza-like Illness Surveillance Network

Thirty-three providers in Texas reported data to the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) (formerly known as the U.S. Influenza Sentinel Provider Surveillance System) on patients with influenza-like illness (ILI) and total patients seen for any reason during week 30. Twelve (36%) of these providers saw at least one patient with ILI. Of all patient visits during this week, 0.59% were due to ILI. The ILI baseline for HHS Region 6 (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas) of the United States is 4.6% for the 2008-2009 season. The baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons plus two standard deviations.

# National Influenza Activity Map

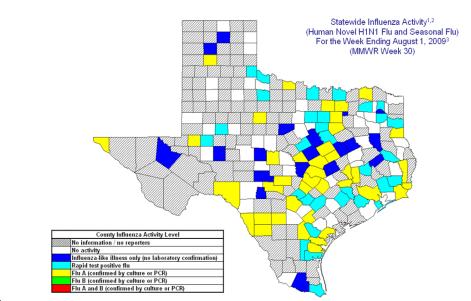

The current U.S. flu weekly report may be found at

# http://www.cdc.gov/flu/weekly/fluactivity.htm.

\*This map indicates geographic spread and does not measure the severity of influenza activity.

For more information on flu surveillance activities in the State of Texas, please visit our main surveillance page.

<sup>1</sup>Influenza activity level corresponds to current MMWR week only and does not reflect previous weeks' activity.

<sup>2</sup>The majority of influenza cases are not reportable by law to the Texas Department of State

Health Services. This map contains data from sentinel sites and does not represent all

influenza cases in the state.

<sup>3</sup>Positive laboratory results are reported according to specimen collection date or date received in the lab if the former is unknown.
