

Pediatric Asthma Admission Rate (Observed, Pediatric Population Under Age 18), 2016

Asthma is the one of the most frequent reasons for hospital admissions among children. Millions of missed school days and parental workdays are attributed to pediatric asthma. Children with asthma have airways that are overly sensitive to certain asthma triggers, which differ from child to child. Some common triggers are exercise, allergies, viral infections, and smoke. Adherence to treatment guidelines – which emphasize appropriate diagnosis of asthma, a physician-patient relationship, management of asthma symptoms with medications, appropriate preventive and maintenance therapy, and adequate follow-up care – can reduce hospital admission rates. Children need to follow a customized asthma management plan to control their symptoms. The severity of a child’s asthma can both worsen and improve over time, placing him in a new asthma category that requires different treatment.

Pediatric Asthma Admission Rate (Observed, Pediatric Population Under Age 18), 2016
