

4,000 chemicals.

69 cause cancer.

Kind of takes your breath away.

Do the math. When we breathe in secondhand smoke we breathe in poisons like arsenic (think rat poison) and formaldehyde (those dissected frogs). It causes lung cancer, emphysema and heart disease, not to mention asthma, chronic coughs and pneumonia in children. Protect yourself and those around you. Share the air, not the smoke.

shareair

We all have the right to breathe clean air.
